

KENSOL 46H

HEAVY DUTY MANUALLY OPERATED ROLL LEAF STAMPING PRESS

Newly designed, and highlighted by a number of improved operating features the Kensol 46H is the replacement for the popular Kensol 36. Toggle-actuated, the 46H operates within a medium-pressure range, and is ideally suited to graphic arts applications such as book covers and packaging, where requirements often call for stamping relatively large areas. The 46H is especially useful when stamping leather goods, wood products, plastic novelties or similar small quantity jobs. Large shops use manual presses when proofing, sample-making or running prototypes, rather than occupying expensive equipment with short-run work.

An existing 46H can be converted to an air-operated unit, should production require it, by purchasing the air and electrical components.

For a complete selection of available type and die holders refer to the type and die holder brochure.

SPECIFICATIONS

IMPRESSION AREA	HEAT SYSTEM
5 x 6 Inches	800 Watts
6 x 8 Inches	1,000 Watts
6 x 12 Inches	1,500 Watts
ROLL LEAF ATTACHMENT	Mechanical Front to back with rewind device
HEAD STROKE	3 Inches
DEPTH OF THROAT	9¼ Inches
MAXIMUM OPENING	7 Inches. Will hot stamp items up to 4 inches high.
WORK TABLE	12" x 18"
THERMOSTAT	Robertshaw 0-550° complete with dial and pilot light
ELECTRICAL REQUIREMENTS	110 Volts AC standard. 220 Volts AC available.
DIMENSIONS	28" deep x 19" wide x 34½" high
WEIGHT	610 pounds net
